PROFESSIONAL EXPERIENCE

KOLOSSEUM MARKETPLACE: *Data Analyst Researcher Intern*

Dec 2025 – Present

- Built and prepared Safe Meetup Datasets by collecting public data (police stations, libraries, malls, city safe zones), cleaning addresses/coordinates/hours, and exporting intergradation ready CSV/JSON files for the mobile application to provide users with safe recommendation locations amongst sellers/buyers.
- Conducted streetwear authentication partner research (CheckCheck, Poizon, Legit App), documenting pricing, accuracy, workflows, and API feasibility for product integration.
- Developed Kolosseum's analytics foundation, dashboards, defining tracking events, naming conventions, schema mappings, and metric dashboards (growth, funnels, retention, engagement) using simple data.

CSU SACRAMENTO: *Instructional Student Assistant - Tutor*

July 2024 – May 2025

- Tutored students in regression, data mining, and machine learning topics (Logistic Regression, KNN, Decision Trees, and Ensembles).
- Supported data cleaning, missing value handling, dummy variables, model evaluation (precision/recall, F1, and confusion matrices)
- Helped student's complete assignments and projects using Python, Jupyter Notebooks, and JMP, improving course performances amongst appointees

YIFANG TAIWAN FRUIT TEA: *Drink Barista*

May 2024 – Jan 2026

- Delivered fast-paced customer service while handling high order volume, POS transactions, and drink quality consistency.
- Collaborated with team members to maintain store cleanliness, speed, and customer satisfaction during peak hours.
- Maintained consistent drink quality by following standardized recipes, ingredient prep, and sanitation procedures while managing high-volume rush periods

EDUCATION

CSU SACRAMENTO | College of Business | Bachelor of Science
Major: Business Analytics | **GPA:** 3.59

Honors: University Dean's List '24, '25

PROJECTS / ACHIEVEMENTS

DATAFEST AT SAC STATE: *Judges Choice Award*

April 2025

- Analyzed Savills commercial lease dataset to uncover drivers of office leasing trends across U.S. regions, focusing on rent, square footage, and market location via SQL and Python
- Developed and tuned a decision tree model that achieved a 92% accuracy in predicting lease outcomes, supporting data-driven consulting recommendations.
- Presented findings to a panel of industry judges, earning the Judge's Choice Award for delivering actionable insights and high model interpretability.

SBA NATIONAL CASE: *Machine Learning Project*

April - May 2025

- Built predictive models to assess loan repayment risk, focusing on minimizing loan defaults through precision-optimized classification methods such as KNN, CART, Ensembles, Logistic Regression, and Neural Nets via Python.
- Incorporated business costs into model evaluation, using net profit analysis, cross-validation, and custom threshold tuning to handle class imbalances and asymmetric misclassification costs.
- Delivered data-driven lending recommendations using Python improving decisions accuracy and financial impact for small business loan approvals.

SKILLS

*Python • SQL • Excel • Tableau • Pandas • NumPy • Scikit-learn • Seaborn • Matplotlib • PyTorch
Communication • Critical Thinking • Teamwork • Organization • Time Management*
